Description

1.01 Conflict Minerals Report for the reporting period January 1, 2017 to December 31, 2017

Advanced Semiconductor Engineering, Inc.

Conflict Minerals Report

For the year ended December 31, 2017

Corporate Overview

Advanced Semiconductor Engineering, Inc. (“ASE”, “we”, “our”, “us”) is among the world’s leading companies in semiconductor packaging and testing sector. Our services include semiconductor packaging, production of interconnect materials, front-end engineering testing, wafer probing and final testing services, as well as integrated solutions for electronic manufacturing services in relation to computers, peripherals, communications, industrial, automotive, and storage and server applications. We utilize gold, tantalum, tin and tungsten which are necessary to deliver our packaging, materials and electronic manufacturing services.

We have manufacturing facilities located in Taiwan, China, Malaysia, Japan, Singapore, Korea and the United States that provide packaging, testing and materials services to many semiconductor companies around the world. A typical customer engagement involves receiving consigned silicon wafers from the customer, performing a series of manufacturing services to the wafers, and delivering a completed, packaged integrated circuit back to the customer.

Since our acquisition of a controlling interest in Universal Scientific Industrial Co., Ltd. (“USI”) in February 2010, we provide a broad range of electronic manufacturing services to a global customer base. We have manufacturing facilities located in Taiwan, China and Mexico that provide electronic manufacturing services. In providing these services, we acquire numerous electronic and non-electronic components, and assemble them into sub-assemblies and finished products.

Product Scope

We determine gold, tin, tungsten or tantalum (“3TG” or “conflict minerals”) are “necessary to the functionality or production” of a product manufactured or contracted to be manufactured by ASE.

- (1) For our packaging and materials services, we typically add gold and tin as direct materials in the manufacturing process, and we occasionally add tungsten and tantalum. We do not use gold, tin, tungsten or tantalum in our testing services.
- (2) For our electronic manufacturing services, typical materials and components which we utilize include solder (tin based), electrolytic capacitors (tantalum bearing), integrated circuits (gold wire) and high temperature wires (tungsten). Gold, tin, tungsten and tantalum are essential to our electronic manufacturing services.

All packaging and materials services and electronic manufacturing services we provide contain one or more of the conflict minerals: gold, tin, tungsten or tantalum.

Reasonable Country of Origin Inquiry (RCOI)

We conducted a reasonable country of origin inquiry (“RCOI”) to determine whether 3TG have originated in the Democratic Republic of the Congo (“DRC”) or its adjoining countries (the “Covered Countries”), or are from recycled or scrap sources.

Our RCOI included to:

- (1) Identify our suppliers who provided us with materials containing 3TG and then use the Conflict Minerals Reporting Template (“CMRT”) developed by the Responsible Minerals Initiative (“RMI”) to facilitate transparency of the supply chain regarding 3TG sourced from the smelters and refiners.

We identified 477 suppliers in the reporting period and used the CMRTs to identify the Smelters or Refiners (“SoRs”) of 3TG and their origin countries.

- (i) For our packaging and materials services, a total of 113 suppliers provided us with materials containing 3TG.
 - (ii) For our electronic manufacturing services, we selected 364 suppliers from a total of 1,610 suppliers who provided us with materials containing metals by the following assessment criteria: (1) the suppliers with purchase amounts greater than US\$0.85 million in 2017, which in aggregate accounted for more than 95% of our total purchase amount, and (2) the suppliers whose conflict minerals are used in the services we provide to our top three customers.
- (2) Confirm with our suppliers that they are in compliance with our conflict minerals policy and their covenant to disclose the source information of the smelters and refiners under the representation letters.

Based on our RCOI results, we have reason to believe that the conflict minerals in our products may have originated in the Covered Countries or may not come from recycled or scrap sources. Therefore, we conducted due diligence on the source and chain of custody of the conflict minerals in our products.

Below are the results of our RCOI.

Packaging and Materials Services

Gold

During 2017, we purchased gold for our packaging and materials services from a total of 53 suppliers. None of these suppliers are SoRs, and all these suppliers purchased gold from SoRs or from third parties. Based on the CMRTs we collected, we identified a total of 86 SoRs from which we indirectly purchased gold in 2017 for our packaging and materials services. All 53 of our gold suppliers for our packaging and materials services responded to our request to identify the SoRs from which they sourced gold during 2017, representing 100% of our total gold expenditure.

Based on an inspection of the list available at www.responsiblemineralsinitiative.org/ conducted on December 31, 2017, all 86 SoRs from which we indirectly purchased gold in 2017 for our packaging and materials services are participants in at least one of (i) the Responsible Minerals Assurance Process (“RMAP”) operated by RMI, (ii) the Gold Industry—London Bullion Market Association (“LBMA”), or (iii) the Gold Industry—Responsible Jewellery Council (“RJC”).

Tin

During 2017, we purchased tin for our packaging and materials services from a total of 64 suppliers. None of these suppliers are SoRs, and all these suppliers purchased tin from SoRs or from other third parties. Based on the CMRTs we collected, we identified a total of 62 SoRs from which we indirectly purchased tin in 2017 for our packaging and materials services. All 64 of our tin suppliers for our packaging and materials services responded to our request to identify the SoRs from which they sourced tin during 2017, representing 100% of our total tin expenditure.

Based on an inspection of the list available at www.responsiblemineralsinitiative.org/ conducted on December 31, 2017, all 62 SoRs from which we indirectly purchased tin in 2017 for our packaging and materials services are participants in the RMAP operated by RMI.

Tungsten

During 2017, we purchased tungsten for our packaging and materials services from a total of six suppliers. None of these suppliers are SoRs, and all these suppliers purchased tungsten from SoRs or from other third parties. Based on the CMRTs we collected, we identified 32 SoRs from which we indirectly purchased tungsten for our packaging and materials services in 2017. All six of our tungsten suppliers for our packaging and materials services responded to our request to identify the SoRs from which they sourced tungsten during 2017, representing 100% of our total tungsten expenditure.

Based on an inspection of the list available at www.responsiblemineralsinitiative.org/ conducted on December 31, 2017, all 32 SoRs from which we indirectly purchased tungsten for our packaging and materials services in 2017 are participants in the RMAP operated by RMI or participants in the Tungsten Industry—Conflict Minerals Council (“TI-CMC”).

Tantalum

During 2017, we purchased tantalum for our packaging and materials services from two suppliers. None of these suppliers are SoRs, and all these suppliers purchased tantalum from SoRs or from other third parties. Based on the CMRTs we collected, we identified a total of 32 SoRs from which we indirectly purchased tantalum in 2017 for our packaging and materials services. All two of our tantalum suppliers for our packaging and materials services responded to our request to identify the SoRs from which they sourced tantalum during 2017, representing 100% of our total tantalum expenditure.

Based on an inspection of the list available at www.responsiblemineralsinitiative.org/ conducted on December 31, 2017, all 32 of the SoRs from which we indirectly purchased tantalum in 2017 for our packaging and materials services are participants in the RMAP operated by RMI.

Electronic Manufacturing Services

During the reporting period, we selected 364 suppliers from a total of 1,610 suppliers for our electronic manufacturing services for the purpose of identifying SoRs. The 364 suppliers were selected based on the assessment criteria mentioned in the section entitled “Reasonable Country of Origin Inquiry (RCOI)”.

Gold

Among the 364 selected suppliers, we purchased gold for our electronic manufacturing services from 247 suppliers in 2017. None of these suppliers are SoRs, and all these suppliers purchased gold from SoRs or from other third parties. Based on the CMRTs we collected, we identified 100 SoRs from which we indirectly purchased gold for our electronic manufacturing services. All 247 gold suppliers responded to our request to identify the SoRs from which they sourced gold during 2017.

Based on an inspection of the list available at www.responsiblemineralsinitiative.org/ conducted on December 31, 2017, all 100 SoRs from which we indirectly purchased gold for our electronic manufacturing services in 2017 are participants in at least one of (i) the RMAP operated by RMI, (ii) the LBMA, or (iii) the RJC.

Tin

Among the 364 selected suppliers, we purchased tin for our electronic manufacturing services from 291 suppliers in 2017. None of these suppliers are SoRs, and all these suppliers purchased tin from SoRs or from other third parties. Based on the CMRTs we collected, we identified 73 SoRs from which we indirectly purchased tin for our electronic manufacturing services. All 291 tin suppliers responded to our request to identify the SoRs from which they sourced tin during 2017.

Based on an inspection of the list available at www.responsiblemineralsinitiative.org/ conducted on December 31, 2017, all 73 SoRs from which we indirectly purchased tin for our electronic manufacturing services in 2017 are participants in the RMAP operated by RMI.

Tungsten

Among the 364 selected suppliers, we purchased tungsten for our electronic manufacturing services from 138 suppliers in 2017. None of these suppliers are SoRs, and all these suppliers purchased tungsten from SoRs or from other third parties. Based on the CMRTs we collected, we identified 41 SoRs from which we indirectly purchased tungsten for our electronic manufacturing services. All 138 tungsten suppliers responded to our request to identify the SoRs from which they sourced tungsten during 2017.

Based on an inspection of the list available at www.responsiblemineralsinitiative.org/ conducted on December 31, 2017, all 41 SoRs from which we indirectly purchased tungsten for our electronic manufacturing services in 2017 are participants in either the RMAP operated by RMI or the TI-CMC program.

Tantalum

Among the 364 selected suppliers, we purchased tantalum for our electronic manufacturing services from 104 suppliers in 2017. None of these suppliers are SoRs, and all these suppliers purchased tantalum from SoRs or from other third parties. Based on the CMRTs we collected, we identified 42 SoRs from which we indirectly purchased tantalum for our electronic manufacturing services. All 104 tantalum suppliers responded to our request to identify the SoRs from which they sourced tantalum during 2017.

Based on an inspection of the list available at www.responsiblemineralsinitiative.org/ conducted on December 31, 2017, all 42 SoRs from which we indirectly purchased tantalum for our electronic manufacturing services in 2017 are participants in the RMAP operated by RMI.

Part I. Due Diligence

Design of Due Diligence

ASE designed its due diligence measures to conform to the Organisation for Economic Co-operation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas: Third Edition (the “OECD Guidance”), including the related supplements on tantalum, tin, tungsten and gold.

Due Diligence Measures Performed

OECD Step 1	Establish strong company management systems
A. Adopt and clearly communicate to suppliers and public	<p>The <i>ASE Group Corporate Policy for Sourcing Conflict Minerals</i> is posted on our website (and attached here as Annex A) to address our commitment to exercise due diligence in accordance with the OECD Guidance.</p> <p>Additionally, we distribute our conflict minerals policy to each of our suppliers of conflict minerals who must agree that the policy will be complied with and required each supplier to certify they understand our conflict minerals policy and will comply with its covenants.</p>
B. Structure internal management to support due diligence	<p>Our conflict minerals management team is a comprehensive cross-functional team under the direction of our Chief Operating Officer (“COO”).</p> <p>The team is responsible for implementing the conflict minerals compliance mechanism, including planning, analysis, tracking, monitoring, and communication and reporting for the business wide initiative.</p>
C. Establish a system of controls and transparency over the mineral supply chain	<p>Conflict minerals procedures are documented in our specifications system and managed by our conflict minerals management team. The bills-of-materials required for different customer products across all manufacturing operations are controlled by our manufacturing execution system software.</p> <p>The primary method for gathering conflict mineral data is through the deployment and gathering of Responsible Minerals Initiative (“RMI”), which is developed by Conflict Minerals Reporting Template (“CMRT”). We store such data and maintain other related records for a minimum of five years in a comprehensive filing system.</p> <p>Aligned with industry practice, we utilize a conflict minerals data tool to manage a large number of suppliers’ CMRTs, auto-validates smelter status with updated RMI smelter list and aggregates smelter reporting for our customers.</p>
D. Strengthen company	<p>ASE communicates our conflict minerals policy and requirements to relevant suppliers through supplier’s representation letter. In addition to the formal written documentation, ASE is building person-to-person links between employees and</p>

engagement with suppliers	<p>suppliers to improve the quality and consistency of supplier communications.</p> <p>We hold an annual supplier seminar to announce new requirements, and provide training to suppliers to enable them to better understand how to improve their conflict minerals monitoring mechanism, including smelter data quality.</p> <p>We amended and added conflict minerals terms to our <i>ASE Group Purchase Order</i> pursuant to which our suppliers agree (i) to use industry standard efforts to ensure 3TG materials covered by the purchase order and sourced from mines in the DRC or the Covered Countries do not directly or indirectly finance illegal militia in the above-mentioned area, (ii) to promptly notify us if any materials covered by the purchase order do contain conflict minerals that are not DRC Conflict Free and to provide a report on the mine and/or smelter of origin of the conflict minerals and the related chain of custody and (iii) to only supply us with materials that contain DRC Conflict Free minerals sourced from certified DRC Conflict Free smelter and refinery programs.</p>
E. Establish grievance mechanism	<p>ASE encourages suppliers and employees to have open and honest dialog on issues of mutual interest.</p> <p>We provide two email addresses (ASE_CM@aseglobal.com and conflict_minerals@usiglobal.com) for general surveys, inquiries and grievances regarding our conflict minerals program. Our conflict mineral mechanism can also be found on our website (http://ase.aseglobal.com/en/csr/supply_chain_development/conflict_minerals_compliance and http://www.usish.com/english/minerals.asp).</p>
OECD Step 2	Identify and assess risk in the supply chain
A. Identify risks in the supply chain	<p>Our process for identifying conflict minerals risk in the supply chain is as follows:</p> <ol style="list-style-type: none"> (a) Identify all our suppliers who provide direct materials and components which may contain conflict minerals being necessary to the functionality or production of our products. (b) Conduct an annual suppliers’ survey through the CMRTs to identify the SoRs and the origin countries of conflict minerals. (c) Review each received CMRT based on our internal standard procedure to check the quality such as the suppliers’ conflict minerals policies, suppliers’ data collection from next tier suppliers, and SoRs identification and disclosure. (d) For our electronic manufacturing services, depending on the complexity of the supply chain, we: <ul style="list-style-type: none"> • Assess the value of the annual purchase volume of all conflict minerals. • Prioritize conflict mineral sources by dollar volume to leverage impact from available analytical resources.
B. Assess risks of adverse	<ol style="list-style-type: none"> (a) Assess data gathered on the CMRTs to identify potential inconsistencies or “red flags.” (b) Define annual supplier risk criteria.

impacts	<p>(c) Carry out on-site or document audit for suppliers determined as at-risk suppliers according to the risk criteria.</p> <p>(d) Follow up as appropriate to resolve items of concern.</p>
OECD Step 3	Design and implement a strategy to respond to identified risks
A. Report finding to designated senior management	<p>Periodic reviews are held and status are reported to our COO and Chief Financial Officer (“CFO”) who are also our Corporate Sustainability Committee members and senior management in order for them to be aware of current conflict minerals compliance status.</p>
B. Devise and adopt a risk management plan	<p>Our risk management plan includes tracking SoRs information to check if they may be from DRC or the Covered Countries, or not from scrap or recycled sources.</p> <p>We compare supplier smelter data to RMI RCOI data to identify actual smelter origins.</p> <p>Additionally, we use a corporate standard conflict minerals audit checklist and implement an on-site or document audit process to validate suppliers’ mechanisms related to important aspects of conflict minerals management.</p> <p>Finally, we continue to work with non-compliant suppliers to obtain RMAP certification, or other independence third party audit program. Suppliers unwilling or incapable of achieving such certification are considered to be replaced by compliant suppliers.</p>
C. Implement the risk management plan, monitor and track performance of risk mitigation efforts and report back to designated senior management	<p>We use CMRTs and the up-to-date RMAP compliant smelter lists to monitor and track our suppliers and their SoRs information. For compliance year 2017, our packaging and materials services received CMRTs from 100% of our conflict minerals suppliers surveyed and electronic manufacturing services received CMRTs from 100% of our conflict mineral suppliers surveyed.</p> <p>We request our suppliers to provide an updated response of their CMRTs if there is any change. We maintain a regular communication channel with our senior management as mentioned-above.</p>
D. Undertake additional fact and risk assessments	<p>We have begun supplier audits to assess the accuracy of data and statements made by larger suppliers. This program will be broadened over time.</p> <p>As a member of the RBA and RMI, RCOI data is accessible to use and to manage</p>

for risks requiring mitigation, or after a change of circumstances	our suppliers' SoRs information.
OECD Step 4	Carry out independent third-party audit of supply chain due diligence at identified points in the supply chain
	<p>For Compliance Year 2017, ASE has undertaken an Independent Private Sector Audit (IPSA) of our Conflict Minerals Report in compliance with the requirements set forth in the SEC Conflict Minerals Final Rule and subsequent SEC Guidance.</p> <p>As a member of RMI, we leverage the due diligence conducted on smelters by the RMAP which uses independent third-party auditors to audit the source of the conflict minerals used by smelters.</p>
OECD Step 5	Report on supply chain due diligence.
	<p>We report annually on our supply chain due diligence activities including the conflict minerals program in our annual sustainability report and we file a Form SD and Conflict Minerals Report ("CMR") for Compliance Year 2017 with the US Securities and Exchange Commission on or before the May 31, 2018 deadline in compliance with the SEC Conflict Minerals Final Rule and subsequent guidance. This information is publicly available on our company website at http://ase.aseglobal.com/en/csr/supply_chain_development/conflict_minerals_compliance</p>

Part II. Due Diligence Determination and Product Declaration

Product Declaration

Our RCOI results did not provide us a sufficient level of confidence to enable us to report that all our products are conflict-free. Pursuant to Rule 13p-1 under the Securities Exchange Act of 1934, we therefore conducted additional due diligence on the source and chain of custody of the necessary conflict minerals in our products in order to obtain reasonable and reliable evidence that the gold, tin, tungsten or tantalum used by us in 2017 either (i) did not directly or indirectly benefit violent organizations in the Democratic Republic of the Congo or adjacent regions or (ii) came from recycled or scrap sources.

Based on our RCOI analysis and due diligence measures described in this report, we made the following product determinations.

Packaging and Materials Services:

Bases on the CMRT we received, all identified SoRs used in our packaging and materials services products were certified by RMI or were in the process of receiving RMI certificates in 2017. We reasonably believe that such SoRs are DRC Conflict-Free.

Electronic Manufacturing Services:

Given the large number of suppliers for our electronic manufacturing services, we developed a sampling program to select material suppliers for the purpose of identifying SoRs. We believe that our due diligence performed based on the sampling program is sufficient and appropriate to provide a reasonable basis for our determination. Based on the CMRT we received, all identified SoRs used in our electronic manufacturing services products were certified by RMI or were in the process of receiving RMI certificates in 2017. Therefore, we reasonably believe that such SoRs are DRC Conflict-Free.

Glossary

A glossary of abbreviations and terms is included in Annex C.

Facilities used to Process Conflict Minerals

A list of smelters and refiners that sourced conflict minerals utilized in our services is provided in Annex D.

Conflict Minerals Country of Origin

A list of countries where conflict minerals were mined or extracted is listed in Annex E. These minerals may have been smelted or refined in the country of extraction or in facilities around the world.

Part III – Future Due Diligence Improvements

- Continue to improve our conflict minerals process for new suppliers.
- Continue to work with our suppliers to confirm that they understand and comply with ASE’s conflict minerals policy and requirements.
- Work with our suppliers to ensure that the smelters and refiners they source conflict minerals from in our supply chain are actively participating or progressing toward RMAP listing or other independence third party audit programs.
- Assess suppliers’ due diligence processes through on-site audits so as to assist suppliers to build up and improve their internal management systems.
- Enhance our conflict minerals data tool with advanced management and analysis functionalities.
- Annually hold supplier seminars to assist suppliers with their conflict minerals programs.

Part IV – Independent Private Sector Audit

We obtained an independent private sector audit by KPMG. The independent accountant's report is set forth in Annex B.

Annex A – ASE Group Corporate Policy for Sourcing Conflict Minerals

The mining and distribution of “conflict minerals”¹ originating from the Democratic Republic of the Congo (the “DRC”) are sometimes controlled by violent organizations in order to fund conflict in that country and adjacent regions. Our industry supply chains are inadvertently subject to metals derived from these conflict minerals which can be introduced through the metals we use such as gold, tin, tantalum and tungsten. ASE Group is dedicated to the elimination of these conflict minerals in our supply chain and to using only responsibly sourced “conflict-free minerals”². We expect our suppliers to source conflict-free minerals from smelters or refineries that have been certified by an independent third party audit program to fulfill our objective. It is also our objective to support the continued use of conflict-free minerals from the DRC and its adjacent regions such that responsible mining is not diminished. We exercise due diligence with our suppliers on the origin and supply chain of minerals in accordance with the “OECD Due Diligence for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas” to establish conflict minerals management mechanism.

All suppliers to ASE Group must support this policy by:

- (a) Being diligent in their assessment and validation of their supply chains to ensure ASE Group’s objectives of a transparent supply chain and conflict-free purchases are inputs to the services and products we produce.
- (b) Be in compliance at all times with all regional and international regulations for conflict minerals.
- (c) Be in compliance at all times with industry standards for the sourcing and reporting of conflict minerals.
- (d) Being diligent and accurate in their formal assurances of conflict-free minerals provided to us.

¹ Conflict minerals are columbite-tantalite (coltan), cassiterite, gold, wolframite, or their derivatives as defined in the Dodd-Frank Act section 1502 and SEC Rule 13p-1 under the Securities Exchange Act of 1934.

² Conflict-free minerals are conflict minerals that through their distribution directly or indirectly do not benefit violent organizations in the Democratic Republic of the Congo and its adjacent regions.

Annex B –Independent Accountants’ Report

Independent Accountants’ Report

To the Board of Directors and Shareholders of Advanced Semiconductor Engineering Inc.:

We have examined:

- whether the design of Advanced Semiconductor Engineering Inc. (the “Company”) due diligence framework as set forth in the section titled “Part I. Due Diligence” of the Company’s Conflict Minerals Report for the reporting period from January 1 to December 31, 2017 (the “Conflict Minerals Report”), is in conformity, in all material respects, with the criteria set forth in the Organisation of Economic Co-operation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, Third Edition 2016 (“OECD Due Diligence Guidance”), and
- whether the Company’s description of the due diligence measures it performed, as set forth in the section titled “Part I. Due Diligence” of the Company’s Conflict Minerals Report, is consistent, in all material respects, with the due diligence process that the Company undertook.

The management of the Company is responsible for the design of the Company’s due diligence framework and the description of the Company’s due diligence measures set forth in the Conflict Minerals Report and the performance of the due diligence measures. Our responsibility is to express an opinion on the design of the Company’s due diligence framework and on the description of the due diligence measures the Company performed, based on our examination.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants and the standards applicable to attestation engagements contained in Government Auditing Standards, issued by the Comptroller General of the United States. Those standards require that we plan and perform the examination to obtain reasonable assurance about whether the design of the Company’s due diligence framework is in conformity with the OECD Due Diligence Guidance and whether the description of the due diligence measures the Company performed is consistent with the due diligence process that the Company undertook in all material respects. An examination involves performing procedures to obtain evidence about the design of the Company’s due diligence framework and the description of the due diligence measures the Company performed. The nature, timing and extent of the procedures selected depend on our professional judgment, including an assessment of the risks of material misstatement of the design of the Company’s due diligence framework and the description of the due diligence measures the Company performed. We believe that the evidence we obtained is sufficient and appropriate to provide a reasonable basis for our opinion.

Our examination was not conducted for the purpose of evaluating:

- the consistency of the due diligence measures that the Company performed with either the design of the Company’s due diligence framework or the OECD Due Diligence Guidance;
- the completeness of the Company’s description of the due diligence measures performed;
- the suitability of the design or operating effectiveness of the Company’s due diligence process;
- whether a third party can determine from the Conflict Minerals Report if the due diligence

measures the Company performed are consistent with the OECD Due Diligence Guidance;

- the Company's reasonable country of origin inquiry (RCOI), including the suitability of the design of the RCOI, its operating effectiveness, or the results thereof; or
- the Company's conclusions about the source or chain of custody of its conflict minerals, those products subject to due diligence, or the DRC Conflict Free status of its products.

Accordingly, we do not express an opinion or any other form of assurance on the aforementioned matters or any other matters included in any section of the Conflict Minerals Report other than the section titled "Part I. Due Diligence."

In our opinion,

- the design of the Company's due diligence framework for the reporting period from January 1 to December 31, 2017 as set forth in the Company's Conflict Minerals Report is in conformity with the OECD Due Diligence Guidance in all material respects; and
- the Company's description of the due diligence measures it performed for the reporting period from January 1 to December 31, 2017 as set forth in its Conflict Minerals Report is consistent with the due diligence process that the Company undertook in all material respects.

*CID002232 & CID002015 SoRs were determined to be in ASE's conflict minerals supply chain as of December 31, 2017. However such SoRs were subsequently found to be inoperative during 2017.

Annex E – Countries of Origin of Conflict Minerals

It is likely that we used conflict minerals from many of the following sources as well as some that are not identified.

Argentina	Australia	Austria	Benin
Bolivia (Plurinational State of)	Brazil	Burkina Faso	Burundi
Cambodia	Canada	Chile	China
Colombia	Congo (Democratic Republic of the Congo)	Ecuador	Eritrea
Ethiopia	France	Germany	Ghana
Guatemala	Guinea	Guyana	Honduras
India	Indonesia	Japan	Kazakhstan
Laos	Madagascar	Malaysia	Mali
Mexico	Mongolia	Mozambique	Myanmar
Namibia	Nicaragua	Nigeria	Panama
Peru	Portugal	Russian Federadtion	Russian Federation
Rwanda	Senegal	Sierra Leone	South Africa
Spain	Thailand	Togo	Uganda
United Kingdom of Great Britain and Northern Ireland	United States of America	Uzbekistan	Viet Nam
Zimbabwe	Recycle/ Scrap
